

Your **learning** gets scattered.

THE COST OF DISCONNECTED CHATS

You learned something. Can your next agent tell?

Useful context can stay buried in chats: what clicked, what remains unclear, and which artifact matters. Switching tools can mean reconstructing the journey.

Keeping a transcript helps. It does not, by itself, identify what you actually understood.

Open Teacher gives memory a shared meaning.

A CONTRACT BETWEEN TOOLS

Standardize the handoff. Keep the conversation open.

The specification defines what useful learning records mean and how agents maintain them. Different tools can preserve the same journey.

This repository includes a reference workspace. Other implementations can use different interfaces and layouts.

Your **agent** teaches. The **standard** connects.

The agent changes. The record stays.

TRY SWITCHING THE AGENT

Keep your history when your tools change.

Your agent provides reasoning, conversation, and tools. Open Teacher defines the shared memory contract. It is not an agent or a model of its own.

A compatible agent needs access to the same up-to-date files and must follow the standard. This selector is a conceptual demo, not a live AI connection.

Good **memory** keeps the distinctions.

OBSERVATION

WHAT THE RECORD CAN SAY

Agent explains an idea

Introduced

“That feels clear now”

Self-reported clarity

You solve a new example

Observed performance

Record the task, date, and help given.

INSPECT IT. CORRECT IT.

Remember what happened, not an inflated score.

A useful record preserves questions, attempts, assistance, and corrections. It separates a correct explanation from evidence of your understanding.

One successful attempt still does not establish broad or lasting mastery. Claims stay scoped to their evidence.

Your **next question** chooses the direction.

NO REQUIRED SYLLABUS

Go deep. Switch topics. Return whenever you like.

Explore an idea today and something unrelated tomorrow. Retrieve prior learning when it helps. A saved unfinished question is a place to return, not an obligation.

Courses, quizzes, reviews, and projects can help when you want them. None is a required entrance to an ordinary question.

Your **artifacts** stay connected to the learning.

USEFUL BEYOND THE CHAT

Keep the explanation. Keep what made it click.

Save diagrams, experiments, code, and slide decks with their context and editable sources. Projects can connect several outputs without duplicating them.

A finished artifact is not proof of understanding. Preserve what the learner actually did alongside what the agent generated.

Bring your **AI**. Keep your **learning**.

1

Get the workspace

Clone funcicons/open-teacher

2

Open your preferred agent

Give it access to the local files

3

Ask one question

"Read AGENTS.md. Help me understand..."

OPEN TEACHER · DRAFT 0.1

A shared standard. A journey you control.

Try the reference workspace, or implement the standard in your own tool. No Open Teacher account, server, database, or fixed curriculum is required.

Personal files are ignored by Git by default. Your chosen AI provider may still process the content it reads.
